PROJECTS

Process Monitoring

- Built a server and tracer program that executes and manages system processes, providing details such as process ID and duration, as well as storing relevant data.

Vinted marketplace

- Created an app that functions like Vinted, enabling users to purchase and sell both new and pre-owned items within a marketplace. Additionally, it features systems of delivery companies, receipts and returns.

Personal portfolio

- Made a personal portfolio website (https://t-yago.github.io/) featuring all my contacts and projects.

Uber Database Management System

- Devoloped a project that revolves around parsing data from CSV files that contain information about rides, users, and drivers. This information is then cross-referenced to answer specific queries.

Stack Machine

- Implemented a program that revolves around a stack machine with multiple operators that accepts various data types.

Block Dude

- Created a "Block Dude" puzzle game with Haskell where players navigate through levels by moving blocks and climbing to reach the exit.

EDUCATION

University

Currently enrolled in the second year of Software engineering at **University of Minho**.

Present
|
2021

English learning

Erarned my Cambridge English CEFR Certificate **C1 (186)**.

2021
|
2019

High School

Finished with average: **19.0/20**.

2021
|
2017

Musical School

Achieved Classical Guitar teaching certificate.

WORKSHOPS

- How to improve your CV .
- How to build a product from scratch.
- How to detect a data breach by an authorized user.
